Published August 20, 2026

While Still Together: Violence and Serious Outcomes in Ongoing Relationships

Warning signs and serious outcomes in relationships that had not ended. Brief 02 uses the same fixed RelationWatch 1,000-case snapshot as Brief 01; it does not add new cases or represent population prevalence.

Based on the same 1,000 verified cases

Complement to Brief 01

OSINT-derived structured case data

999

Fixed snapshot

Same membership as Brief 01

169

Covered in Brief 01

Separation / former-partner condition

753

Known other condition

Analyzed in Brief 02 charts

77

Status not recorded

Not assigned to a relationship condition

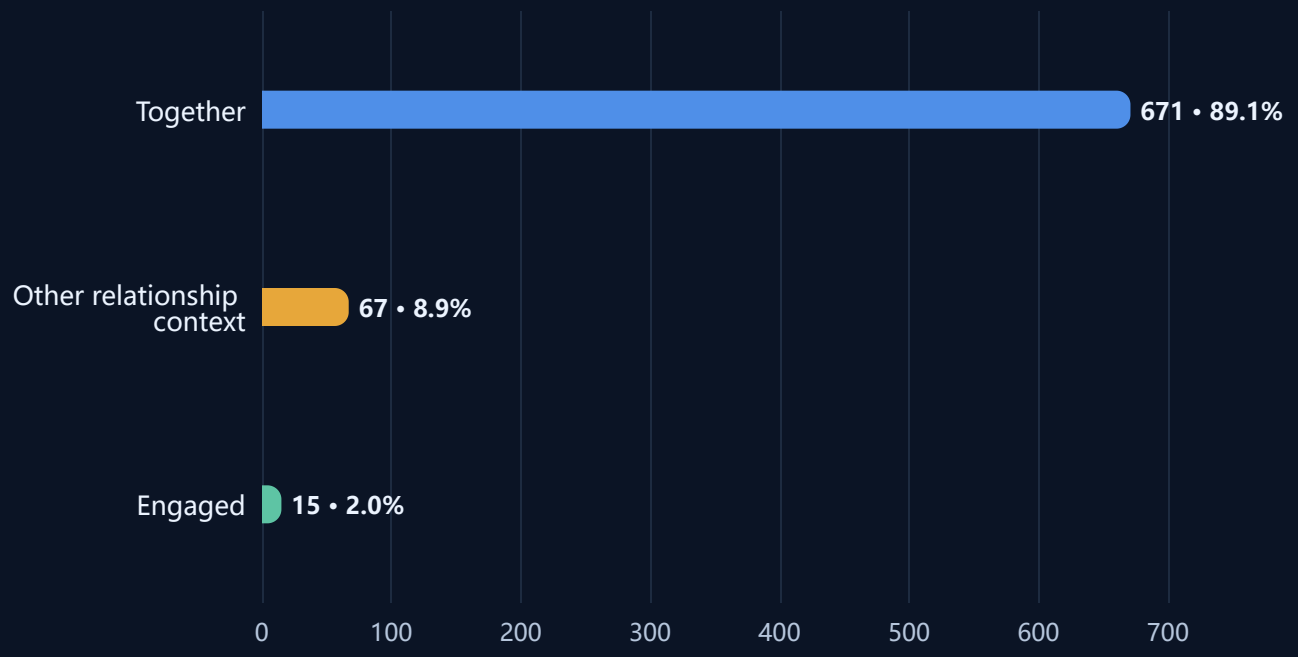

How to read the complementary group

Of the 830 cases outside Brief 01’s separation/former-partner subset, 753 have another recorded relationship condition. The remaining 77 cases lack a usable relationship-status classification and are displayed separately rather than being treated as “together” or “non-separation.”

Other relationship context means: Recorded relationship contexts that do not fit the together, engaged, or separation/former-partner categories. This can include an affair, love triangle, one-sided or rejected relationship, or another recorded relationship context.

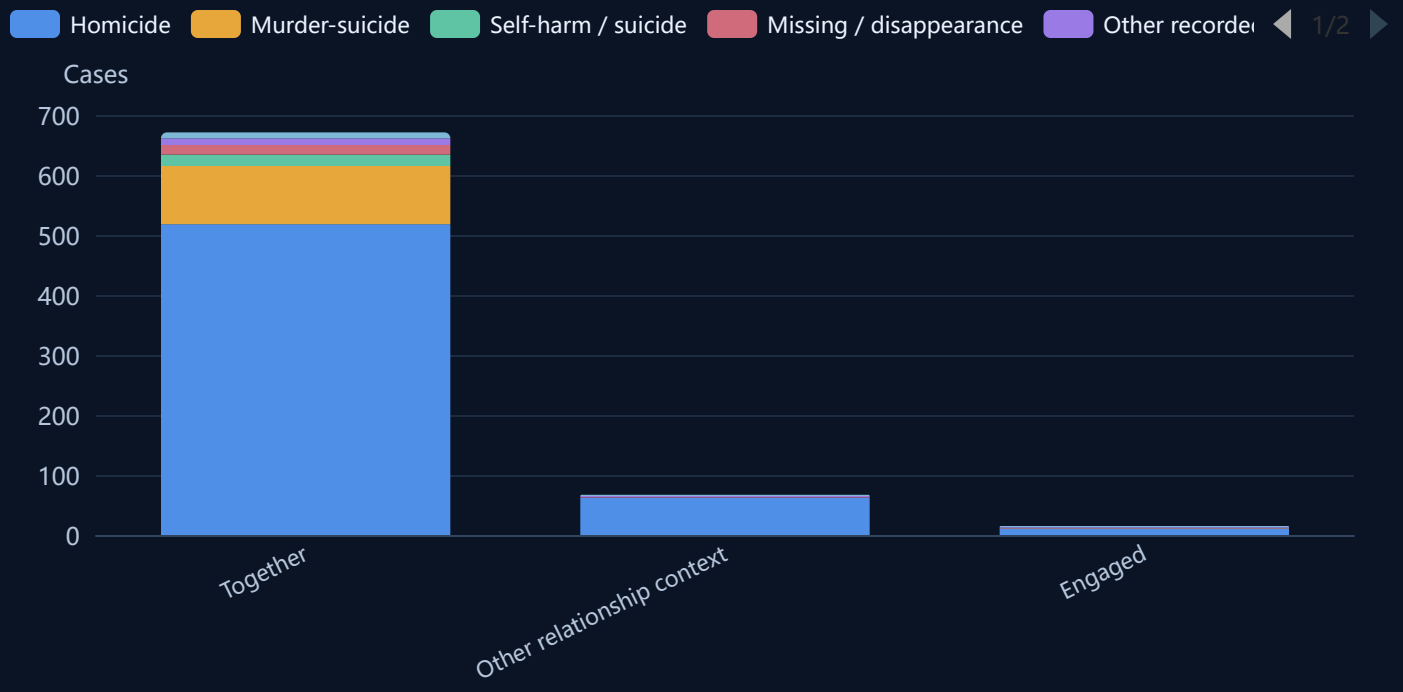

Recorded relationship conditions outside Brief 01

Counts among the 753 cases with a known, non-separation relationship condition.

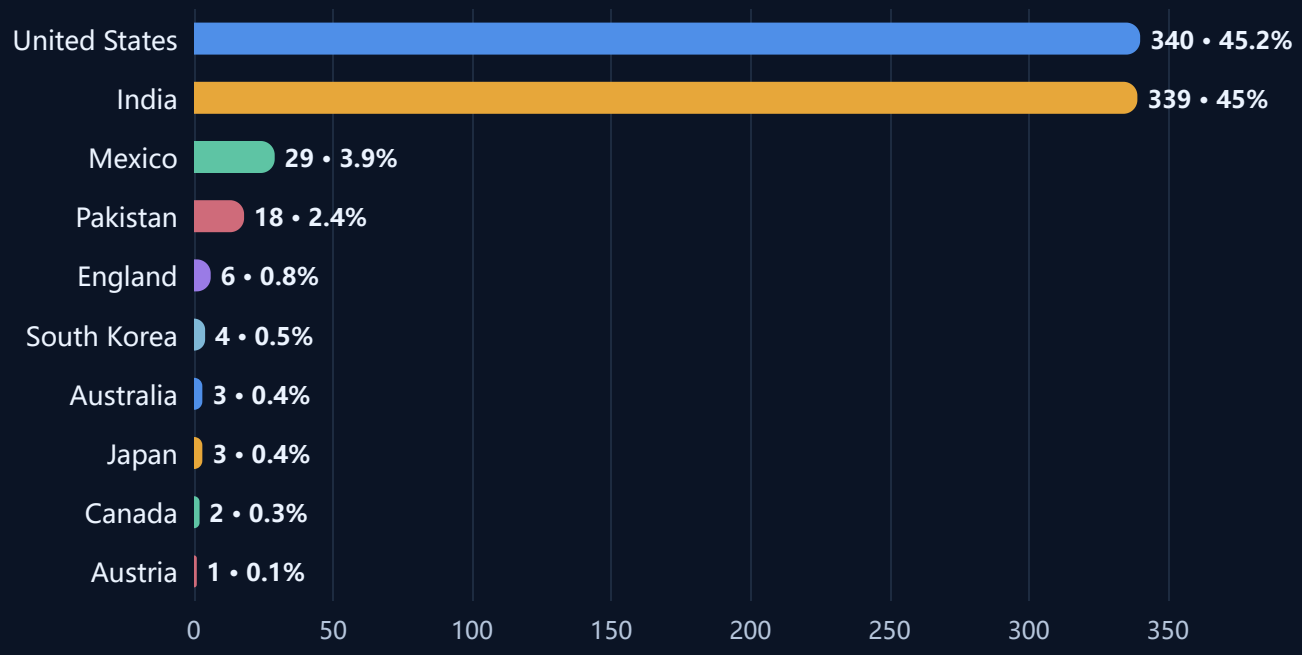

Recorded incident outcomes by relationship condition

Each stacked bar shows outcomes within a recorded condition. These are case classifications, not causal pathways.

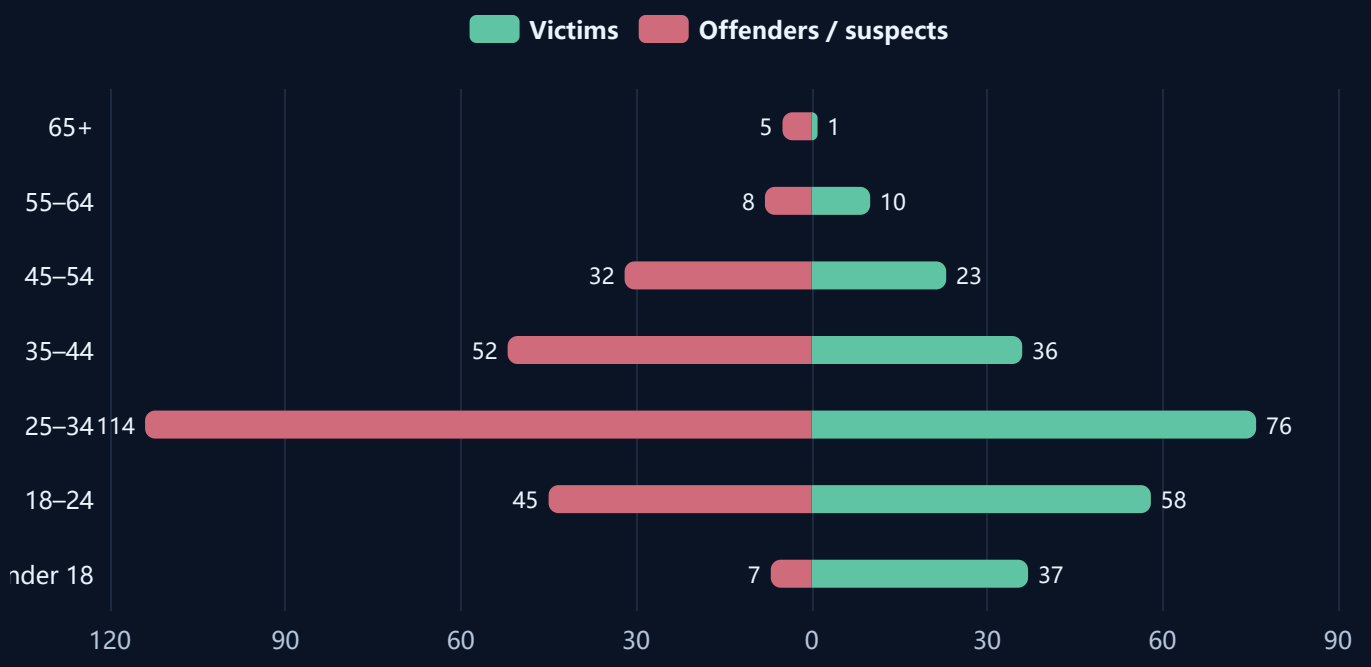

Countries represented in Brief 02's analytical group

Country composition of the 753 cases with a known, non-separation relationship condition; this is not national prevalence.

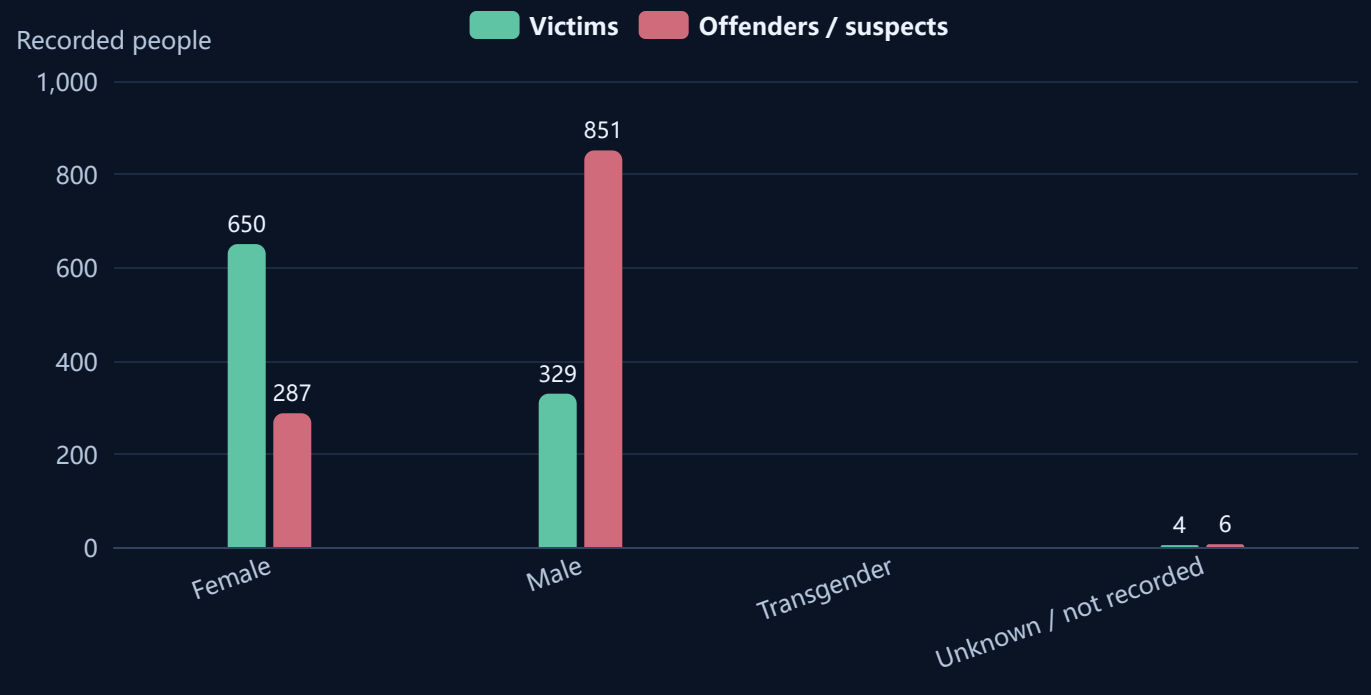

Age at incident: victims and offenders / suspects

Recorded-person age distribution in Brief 02's analytical group. Hover for the applicable denominator and percentage.

Recorded gender: victims and offenders / suspects

Comparison of recorded gender fields in Brief 02's analytical group. Unknown and blank values remain visible.

Recorded pathway snapshots

These show the most common outcome recorded within each non-separation relationship condition in Brief 02.

> 671 Together → 518 Homicide

> 67 Other relationship context → 62 Homicide

> 15 Engaged → 10 Homicide

Each row is a condition-and-outcome intersection in the fixed snapshot. It does not establish that the relationship condition caused the outcome.

How Brief 02 accounts for the fixed snapshot

Brief 02 is the complement to the separation/former-partner analysis in Brief 01. It examines cases with another recorded relationship condition without combining them with cases that have no usable status classification.

Fixed-snapshot group	Cases	Share of 1,000
Separation / former-partner condition — Brief 01	169	16.9%
Another recorded relationship condition — Brief 02	753	75.4%
No usable relationship-status classification	77	7.7%

- The charts in this Brief use the **753** cases with a known non-separation condition as their analytical group.
- “Other relationship context” is a documented classification, not a statement that the relationship was necessarily ongoing, safe, or without conflict.
- The **77** cases without a usable status are retained in the snapshot but are not assigned to Brief 01 or Brief 02’s substantive group.
